The flowchart illustrates the logic for a card game. It begins with a database (DB 832) leading to a decision point (NEXT KEY 840). From here, the flow branches into two main paths. The top path involves displaying a card (DISPLAY CARD 841), which leads to a decision on whether it's the last card (LAST CARD 842). If not the last card, it proceeds to read the next card (READ NEXT CARD 845) and then a card (C 812). If it is the last card, it leads to a decision point (DA 831). The bottom path involves a previous key (PREV KEY 846), which leads to a decision on whether it's the first card (FIRST CARD 847). If not the first card, it leads to a decision point (DA 831). If it is the first card, it proceeds to read the previous card (READ PREVIOUS CARD 849) and then a card (C 812). Additionally, there are branches for handling entry cards (ENTRY CARD 843) and home deck status (HOME DECK 848), both leading to decision points (D 813) or (DA 831) based on specific conditions (Ignore or not).
